Contents

Preface xi

M.B. Abd-El-Malek and S.M.A. El-Mansi
Group theoretic methods applied to Burgers' equation 1

M. Aguirre Téllez
The distributional product of Dirac's delta in a hypercone 13

S. Amini and A. Profit
Analysis of the truncation errors in the fast multipole method for scattering problems 23

C. Angelini and D. De Canditiis
Fourier frequency adaptive regularization for smoothing data 35

M. Azizi, E.M. Daoudi, R. El Hani and A. Lakhouaja
Parallel electromagnetic modelling for the nonlinear electrotechnic systems 51

P. Barral and P. Quintela
Numerical analysis of a viscoplastic problem with contact condition taking place in an aluminium casting 63

H. Bavinck
A note on the Koekoeks' differential equation for generalized Jacobi polynomials 87

L.G. Cabral-Rosetti and M.A. Sanchis-Lozano
Generalized hypergeometric functions and the evaluation of scalar one-loop integrals in Feynman diagrams 93

D. Calvetti, L. Reichel, F. Sgallari and G. Spaletta
A regularizing Lanczos iteration method for underdetermined linear systems 101

M. Calvo, M.P. Laburta, J.I. Montijano and L. Randez
On the numerical integration of orthogonal flows with Runge-Kutta methods 121

J. de Frutos and J. Novo
An enhanced pseudospectral Chebyshev method for dissipative partial differential equations 137
H. De Schepper and R. Van Keer
On the numerical approximation of some types of nonstandard second-order eigenvalue problems for vector valued functions 151

M. do Car sno Coimbra, C. Sereno and A. Rodrigues
Modelling multicomponent adsorption process by a moving finite element method 169

J.A. Ezquerro, M.A. Hernandez and M.A. Salanova
A discretization scheme for some conservative problems 181

E.A. Galperin, E.J. Kansa, A. Makroglou and S.A. Nelson
Variable transformations in the numerical solution of second kind Volterra integral equations with continuous and weakly singular kernels; extensions to Fredholm integral equations 193

G. Gheri and P. Marzulli
Parallel shooting with error estimate for increasing the accuracy 213

M. Hamina
An approximation method for the hypersingular heat operator equation 229

M.A. Hernandez, M.J. Rubio and J.A. Ezquerro
Secant-like methods for solving nonlinear integral equations of the Hammerstein type 245

A. Huard and V. Robin
Continuity of approximation by least-squares multivariate Fade approximants 255

Y. Jeon
Scalar boundary integral equation formulas for the biharmonic equation — numerical experiments 269

P. Junghanns and K. Muller
A collocation method for nonlinear Cauchy singular integral equations 283

A. Kananthai
On the convolution equation related to the /N-dimensional ultra-hyperbolic operator 301

A.H. Khater, A.B. Shamardan, O.K. Callebaut and R.S. Ibrahim
Chebyshev spectral collocation methods for nonlinear isothermal magnetostatic atmospheres 309

J. Kobza
Iterative functional equation \( x(x(t)) = f(t) \) with \( f(t) \) piecewise linear 331

T. Kohno, H. Niki, H. Sawami and Y.-m. Gao
An iterative test for H-matrix 349

L. Lopez, C. Mastroserio and T. Politi
Newton-type methods for solving nonlinear equations on quadratic matrix groups 357
Contents

M.C. López de Silanes, M. Pasadas and J.J. Torrens
Construction of curves with parallelism conditions 369

J. Lorente-Pardo, P. Sablonniere and M.C. Serrano-Perez
On the convexity of Bezier nets of quadratic Powell-Sabin splines on 12-fold refined triangulations 383

P. Lotstedt
Convergence analysis of iterative methods by pseudodifference operators 397

G. Mantica
On computing Jacobi matrices associated with recurrent and Mobius iterated function systems 419

N. Mastronardi and D. Occorsio
The numerical computation of some integrals on the real line 433

H.R. Parks and J.T. Pitts
Energy estimates for area minimizing hypersurfaces with arbitrary boundaries 451

C. Penski
A new numerical method for SDEs and its application in circuit simulation 461

C. Radoux
Addition formulas for polynomials built on classical combinatorial sequences 471

M. Robb and M. Sadkane
Discrete-time Lyapunov stability of large matrices 479

S. Sallam and M.N. Anwar
Quintic C^s spline integration methods for solving second-order ordinary initial value problems 495

J. Schropp
Conserving first integrals under discretization with variable step size integration procedures 503

H. Swann
On using the cell discretization algorithm for mixed-boundary value problems and domain decomposition 519

H. Taseli
Accurate numerical bounds for the spectral points of singular Sturm-Liouville problems over \(-\infty < x < \infty\) 535

P.J. van der Houwen, E. Messina and B.P. Sommeijer
Oscillatory Stormer-Cowell methods 547

A. Vecchio
Stability of backward differentiation formulas for Volterra integro-differential equations 565
Contents

R. Weber and J. Hureau
Numerical solution for various inverse problems 577

S. Wollman
The particle method for the Vlasov-Poisson system using equally spaced initial data points 593

V. Wulfand N.J. Ford
Numerical Hopf bifurcation for a class of delay differential equations 601
