L_3 oo-solutions of the Navier - Stokes equations and backward uniqueness
L. Escauriaza, G. Seregin, and V. Sverak

Sixth problem of the millennium: Navier - Stokes equations, existence and smoothness
O. A. Ladyzhenskaya

Global solubility of the three-dimensional Navier - Stokes equations with uniformly large initial vorticity
A. S. Makhalov and V. P. Nikolaenko [Alex Mahalov and Basil Nicolaenko]

On some unresolved issues in non-linear fluid dynamics
K. R. Rajagopal

On estimates of solutions of the non-stationary Stokes problem in anisotropic Sobolev spaces and on estimates for the resolvent of the Stokes operator
V. A. Solonnikov

Communications of the Moscow Mathematical Society

The Banach - Mazur theorem for spaces with an asymmetric distance
A. R. Alimov

On sets of time and space averages for continuous functions on a configuration space
B. M. Gurevich and A. A. Tempel'man

Basic embeddings of graphs and Dynnikov's three-page embedding method
V. A. Kurlin

Rings with critically compressible ideals
S.V. Limarenko

Quasi-invariant measures on non-Archimedean Banach spaces
S.V. Lyudkovskii
Phase transitions of a Bose gas in a two-zone crystal model. The thermomechanical effect
V. P. Maslov

A uniqueness criterion for solutions of the Robin problem for a system in elasticity theory in exterior domains
O. A. Matevosyan [Matevossian]

New integrable (2 + l)-equations of hydrodynamic type
M.V. Pavlov

More about a construction for modules over a polynomial ring
O. N. Popov

On time changes for Levy processes
A.V. Selivanov

On an example of Mumford and the factorial property of algebras of automorphic forms for planar groups of genus 0
O. V. Shvartsman

Ideals of hereditary rings
A. A. Tuganbaev

Ol'ga Aleksandrovna Ladyzhenskaya (on her 80th birthday)
