Sommaire

Jean GILLIBERT. — Variétés abéliennes et invariants arithmétiques ................................................................................................................277-297
Guillaume ROND. — Approximation diophantienne dans les corps de séries en plusieurs variables ......................................................... 299-308
Yves STALDER. — Moyennabilité intérieure et extensions HNN ........................................................................................................... 309-323
Sebastian MAYER & Dierk SCHLEICHER. — Immediate and Virtual Basins of Newton's Method for Entire Functions ..................... 325-336
Henry de THÉLIN. — Sur la construction de mesures selles ........................................... 337-372
Ionuţ CHIOSE. — On the embedding and compactification of \( q \)-complete manifolds ........................................................................... 373-396
Erwan ROUSSEAU. — Étude des jets de Demailly-Semple en dimension 3 .......................................................................................... 397-421
Tien-Cuong DINH & Nessim SIBONY. — Geometry of currents, intersection theory and dynamics of horizontal-like maps ................ 423-457
E. K. NARAYANAN & S. THANGAVELU. — A spectral Paley-Wiener theorem for the Heisenberg group and a support theorem for the twisted spherical means on \( \mathbb{C}^n \) .............................................................. 459-473
Éric RICARD. — The von Neumann algebras generated by \( t \)-gaussians ........................................................................................................ 475-498
Sara BROFFERIO. — The Poisson boundary of random rational affinities ................................................................................. 499-515
