CONTENTS

Distribution Theory

Comparison Between Two Quantiles: The Normal and Exponential Cases .................................................. 243
H. Guo and K. Krishnamoorthy

Ordered Data and Inference

BLUEs of Parameters of Generalized Geometric Distribution Using Ordered Ranked Set Sampling .................. 253
N. Balakrishnan and T. Li

Inference Based on Order Statistics from the Generalized Pareto Distribution and Application ...................... 267
M. A. W. Mahmoud, K. S. Sultan, and M. E. Moshref

Regression Analysis

Regression Model with Ordinal Predictor Subject to Measurement Error ....................................................... 283
V. Nguyen and D. L. Hawkins

Linear Models and Applications

A Study of the Authorship of the Books of Oz Using Nested Linear Models ................................................. 293
J. N. G. Binongo and D. P. Mays, III

Switching Linear Models: A General Approach ................................................................................................ 309
D. Salazar, G. Venkatesan, and D. Moen

Design of Experiments

Monitoring Continuous Long-Term Outcomes in Adaptive Designs .............................................................. 321
K. Wust and M. Kieser

Clinical Trials

Analysis of Data from Clinical Trials with Treatment Related Dropouts ....................................................... 343
V. Ramakrishnan and Z. Wang

(Continued on inside back cover)
(Contents Continued)

Multivariate Analysis

Asymptotic Expansion for Sampling Distribution and Sample Size in Statistical Inference III—The Modified Likelihood Ratio A-Test in the Noncentral Case ......................................................... 355
M. Siotani, T. Seo, and T. Iwashita

Performance of the Kenward-Roger Method when the Covariance Structure is Selected Using AIC and BIC .......................................................... 377
E. V. Gomez, G. B. Schaalje, and G. W. Fellingham

Time Series

Wavelet-Based Bootstrap for Time Series Analysis ........................................ 393
H. Feng, T. R. Willemain, and N. Shang

A Comparison of Conditioned Versus Unconditioned Forecasts of the VAR(l) Process .......................................................... 415
H. E. T. Holgersson and F. Lindström

Estimation of Stochastic Volatility Models: An Approximation to the Nonlinear State Space Representation ........................................ 429
J. Shimada and Y. Tsukuda

Reliability

Estimating Hazard Functions for Discrete Lifetimes .................................... 451
S. D. Grimshaw, J. McDonald, G. R. McQueen, and S. Thorley

Comparison of Different Estimators of $P[Y < X]$ for a Scaled Burr Type X Distribution ........................................ 465
M. Z. Raqab and D. Kundu

Quality Control

Design of Minimum Average Total Inspection Sampling Plans ...................... 485
K. Govindaraju
