CONTENTS

Inference

A Note on Estimation in the Four-Parameter Beta Distribution 495
J. Z. Wang

Maximum Likelihood Estimation Under Misspecified Lognormal and Weibull Distributions 503
F. G. Pascual

Critical Values for the Robust Rank-Order Test 525
N. Feltovich

Regression Analysis

Bias in Penalized Quasi-Likelihood Estimation in Random Effects Logistic Regression Models When the Random Effects Are not Normally Distributed 549
P. C. Austin

Variable Selection for Heteroscedastic Data Through Variance Estimation 567
S. Baek, F. Karaman, and H. Ahn

A Comparison of Two Bandwidth Selectors OSCV and AICc in Nonparametric Regression 585
S. Yi

Time Series

Moments of AR(1)-Model Estimators 595
J. Vrbik

Application of M-Estimators to Cross-Section Effect Models 601
G. Pitselis

Reliability

Bias Correction for Mean Time to Failure and p-Quantiles in a Weibull Distribution by Bootstrap Procedure 617
L. L. Ho and A. F. da Silva

A Generalized Method for the Transient Analysis of Markov Models of Fault-Tolerant Systems with Deferred Repair 631
J. Temsamani and J. A. Carrasco

Parametric Confidence Intervals for the Renewal Function Using Coupled Integral Equations 663
S. G. From and M. Tortorella

(Continued on inside back cover)
Survival Analysis

Using Weibull Mixture Distributions to Model Heterogeneous Survival Data ......................................................... 673
J. M. Marin, M. T. Rodriguez-Bernal, and M. P. Wiper

Nonparametric Tests for Independence Between Lifetimes and Covariates from Censored Bivariate Normal Samples ................. 685
J.-A. Kim and N. Balakrishnan

Goodness-of-Fit Tests

Goodness-of-Fit to the Exponential Distribution, Focused on Weibull Alternatives ......................................................... 711
A. Cabaña and E. M. Cabaña

A New Goodness-of-Fit Test Based on the Laplace Statistic for a Large Class of NHPP Models ........................................... 725
J. Zhao and J. Wang

Computational Statistics

A Nonstationary Statistical Model for Computationally Intensive Numerical Ordinary Differential Systems ........................................ 737
D. Drignei

Statistics in Health

Estimating and Testing Treatment Effects on Two Binary Endpoints and Association Between Endpoints in Clinical Trials .................. 751
W. Wang, R. F. Woolson, and W. R. Clarke

Scaling of True and Apparent ROC AUC with Number of Observations and Number of Variables ........................................ 771
P. F. Pinsky

Menopausal Symptom Relief with Acupuncture: Bayesian Analysis Using Piecewise Regression ........................................... 783
J. C. Kern II and S. M. Cohen

Quality Control

Designing of Variables Repetitive Group Sampling Plan Involving Minimum Average Sample Number ........................................ 799
S. Balamurali, H. Park, C.-H. Jun, K.-J. Kim, and J. Lee

Statistics in Sports

Power Ratings for NCAA Division II Football ........................................ 811
D. J. Mundfrom, R. L. Heiny, and S. Hoff
