CONTENTS

Fixed points of countably condensing mappings and its application to nonlinear eigenvalue problems
In-Sook Kim ................................................................. 1

Some existence theorems for functional equations arising in dynamic programming
Zeqing Liu, Jeong Sheok Ume, and Shin Min Kang ... 11

Extending representations of $H$ to $G$ with discrete $G/H$
Jin-Hwan Cho, Mikiya Masuda, and Dong Youp Suh — 29

On a vorticity minimization problem for the stationary 2D Stokes equations
Hongchul Kim and Oh-Keun Kwon ................................. 45

$\tau$-injective submodules of indecomposable injective modules
Septimiu Crivei ............................................................. 65

Linear maps that preserve commuting pairs of matrices over general Boolean algebra
Seok-Zun Song and Kyung-Tae Kang ......................... 77

The solvability conditions for a class of constrained inverse eigenvalue problem of antisymmetric matrices
Xiao-ping Pan, Xi-yan Hu, and Lei Zhang ................. 87

Partially aspherical manifolds with nonzero Euler characteristic as PL fibrators
Young Ho Im and Yongkuk Kim ................................. 99

$p$-adic $q$-higher-order hardy-type sums
Yilmaz Simsek ........................................................... 111

Einstein spaces and conformal vector fields
Dong-Soo Kim, Young Ho Kim, and Seong-Hee Park....... 133

Continued on inside back cover
Maximal space-like hypersurfaces in $H^4_1(-1)$ with zero Gauss-Kronecker curvature

Qing-Ming Cheng and Young Jin Suh ................................. 147

On Yi's extension property for totally preordered topological spaces

M. J. Campión, J. C. Candeal, and Esteban Indurain .......................... 159

$q$-extensions of Genocchi numbers

Mehmet Cenkci, Mumun Can, and Veli Kurt ...................................... 183

The Bergman kernel function and the Szegő kernel function

Young-Bok Chung ........................................................................ 199

Graph representations of normal matrices

Sang-Gu Lee and Han-Guk Seol .................................................... 215
