# Numerical Differential Equations Homework 2 

(Due: May. 17, 2007)

1. Problem 1

Chapter 2, page 37, Exercise 2.2
2. Problem 2

Chapter 2, page 37, Exercise 2.3
3. Problem 3

Use (2.10) to write a program to solve the boundary value problem:

$$
\begin{gather*}
u^{\prime \prime}(x)=f(x) \quad \text { for }-1<x<1  \tag{1}\\
u(-1)=\alpha, \quad u(1)=\beta . \tag{2}
\end{gather*}
$$

Solve the problem with various grid sizes and the conditions below

- $f(x)=2, \alpha=\beta=1$
- $f(x)=12 x^{2}, \alpha=\beta=1$
- $f(x)=e^{x}, \alpha=e^{-1}, \beta=e^{1}$

Discuss the results.
