S. Frohlich
Curvature estimates for $m$-stable $G$-minimal surfaces and theorems of Bernstein type .......................... 109

M. L. de Cristoforis and S. V. Rogosin
A Newton-Kantorovich method for a functional equation relative to the conformal representation. .................................................. 131

V. Vlachou
On some classes of universal functions ............................................. 149

B. E. Rhoades and E. Savaf
Some summability factor theorems for absolute summability ......................... 163

P. Xuecheng
Shared values and nornyl families ............................................. 175

H. Begehr and D. Qin
On the Riemann-Hilbert-Poincare problem for analytic functions ......................... 183

F. Miiller
On the analytic continuation of $H$-surfaces across the free boundary. ......................... 201

D. M. Bradley
Some remarks on sine integrals and their connection with combinatorics, geometry and probability ............................................. 219
