Ergodic theory and dynamical systems

VOLUME 25 PART 2 APRIL 2005

CONTENTS

Adler, R. L., Kitchens, B., Martens, M., Pugh, C., Shub, M. and Tresser, C. Convex dynamics and applications 321

Badura, M. Realizations of growth types 353

Bhattacharya, S. and Ward, T. Finite entropy characterizes topological rigidity on connected groups 365

Bobok, J. and Nitecki, Z. Topological entropy of m-fold maps 375

Buyalo, S. Volume entropy of hyperbolic graph surfaces 403

Chazottes, J.-R. and Collet, P. Almost-sure central limit theorems and the Erdős–Rényi law for expanding maps of the interval 419

Dooley, A. and Quas, A. Approximate transitivity for zero-entropy systems 443

Downarowicz, T. and Frej, B. Measure-theoretic and topological entropy of operators on function spaces 455

Ferenczi, S., Holton, C. and Zamboni, L. Q. Joinings of three-interval exchange transformations 483

Feres, R. and Zeghib, A. Dynamics on the space of harmonic functions and the foliated Liouville problem 503

Field, M., Melbourne, I. and Török, A. Stable ergodicity for smooth compact Lie group extensions of hyperbolic basic sets 517

Khmelev, D. V. Rational rotation numbers for homeomorphisms with several break-type singularities 553

Liu, P.-D. A note on the entropy of factors of random dynamical systems 593

Lopes, A. O. and Thieullen, Ph. Sub-actions for Anosov flows 605

Mai, J.-H. Pointwise-recurrent graph maps 629

Papers to appear in forthcoming issues 639
