MATHEMATICA
TOME 42 (65), 2000

SIMION BREAŻ, Self-small torsion free abelian groups .......................... 3
SILVIA-OTILIA CORDUNEANU, Some applications of the pseudo almost periodc functions and measures ......................................................... 9
PAULA CURT, On cpefficients of starlike and convex mappings in several variables ................................................................. 19
SORJN G. GAL, Univalent functions of hyperbolic complex and of dual complex variable .............................................................. 27
ERTAN IBIKLI, On Stancu type generalizations of Bernstein-Chlodowsky polynomials ................................................................. 37
PIOTR JAKOBČZAK, The stability of the $L^2$-angle for domains with deleted discs ................................................................. 45
PETRU T. MOCANU, New extensions of a theorem of R. Singh and S. Singh, II 61
MARIAN MURESAN, BELA VIZVARI, A note on the problems of stabilization of economic processes ................................................. 67
GHEORGHE OROS, On starlike images by an integral operator ............... 71
EMIL M. POPA, A generalization of the directional derivative .............. 75
MONICA PURCARU, Conformal Metrical $N$-Linear Connections in the Lagrange Geometry of Second Order ....................................... 85
IRJNEL RADOMIR, A univalence criterion for a class of integral operators 93
CORNELIU URSESCU, Continuabuiity, differentiability, and calculus of adjacent and tangent sets ...................................................... 97
BOOK REVIEWS ............................................................................. 113
