M. K. AOUF, H. M. HOSSEN and A. Y. LASHIN, A certain subclass of meromorphically starlike functions with alternating coefficients ............... 3

GEORGE ARGESANU and CSABA SZÁNTÓ, Taft algebras are cyclic serial .... 11

ADRIANA BUICĂ, Gronwall-type nonlinear integral inequalities .................. 19

KHALIDA INAYAT NOOR, On strongly close-to-convex functions ..................... 25

RADU PRECUP, Some existence results for differential equations with both retarded and advanced arguments ........................................ 31

THEMISTOCLES M. RASSIAS, On the stability of functional equations originated by a problem of Ulam ........................................ 39

ADRIAN SANDOVICI, Conservation laws in higher order Lagrange spaces ...... 77

ZSUZSANNA SZABÓ, Improvement of the accuracy of multi-grid method with finite difference discretization (MGFDD) ............................. 87

IOAN SERB, Lipschitz constants of set-valued mappings obtained by intersecting convex sets with balls .......................................... 97

BOOK REVIEWS ............................................. 117
